Comments to the Author

The authors must revise all the text carefully as the English used has many errors, badly constructed sentences and many sentences difficult to understand.

The major criticism I have to this paper is it's lack of clarity and amount of imprecision which makes it very difficult to follow. The goal and contributions presented by this work are not clear throughout the paper. The proposed algorithms advertised in the paper's abstract are not clearly described in the text. Authors should make an effort to better describe their methodology and approach. There is also a wide use of jargon and description of unrelated topics that is somewhat disconnected from the "story" of the paper.

To sum up, authors should completely revise the paper, with a special focus on the English used and on the explanation of the proposal. Tests and results obtained should also be improved.
