General comments	In its current form, this paper is not acceptable. Major improvements are required regarding language, method, results and discussion. It is difficult to identify novelty from the paper.	
Mandatory changes	<p>Please check the conference's guideline on how to write authors' names and affiliations.</p> <p>The language of the paper needs serious improvements. Many grammatical errors are found. I suggest the authors to ask someone having good English to proofread the paper.</p> <p>A good abstract consists of objectives, method, results, and conclusion.</p> <p>The introduction section must be revised. The authors need to clearly mention the motivation of the paper and their objectives. The authors need to discuss the methodology section in detail. For example, what tools are used in the FGD to gather data? In the interview, how the interview questions are designed? What kind of information the authors wanted from them? Since the authors mention experiment, then a discussion on the design of the experiment is required.</p> <p>The authors mention FGD and experiment in the methodology but none of those can be found in the results section. It seems that the authors only measure the duration and do a comparison. I suggest the authors to discuss their results according to their methodology and do statistical analysis.</p>	
Suggested changes
